

# Hazardous Materials

Our mission at Systech Environmental Corporation is to effectively serve customers by providing waste collection, processing, and secure destruction services to create alternate fuels and substitute mineral sources.

**SYSTECH**

## **INNOVATION AND EXPERTISE IN WASTE MANAGEMENT**

For more than 40 years, Systech has been using sustainable methods to manage customers' hazardous waste, beneficially reusing liquid or sludge by-products, also known as Fuel Quality Waste (FQW). The waste is then used as an energy resource to make another product, such as cement, offering a sustainable, "green" solution to waste management. Systech was an early pioneer in the waste disposal industry, and we continue to adapt, innovate and evolve to meet customer needs through environmentally friendly methods.

Today, Systech, and its sister company Geocycle, co-process by-products and waste materials at 22 cement kilns across North America. Both are affiliates of LafargeHolcim, a world leader in the building materials industry. Our hazardous waste network includes cement plants in Paulding OH, Tulsa OK, Holly Hill SC, and processing operations in Fredonia KS and Artesia MS.

## **SERVICES**

- Waste management of hazardous, fuel-quality liquids, sludges and refinery solids
- Management of heated materials
- Truck agitation and cleaning
- Rail agitation and cleaning
- Heel reduction/removal
- Acceptance of smaller (non-bulk) containers
- Acceptance of non-hazardous fuels
- Logistics coordination
- Expertise in understanding regulatory compliance
- Final processing and documentation

*Ohio and Kansas facilities vary slightly on services offered; check with facility for details*

## **MATERIALS HANDLED**

- Inks
- Mineral spirits, petroleum distillates and hydrocarbons
- Paints, solvents and chemical by-products from a wide variety of manufacturing processes
- Pharmaceutical by-products
- Refinery and petrochemical by-products
- Tank bottoms and line flush

#### COUNT ON SYSTECH FOR...

- Keeping our promises—dependability is at the forefront; multiple kilns offer a national network of redundant capacity, even when specific kiln locations may be unavailable
- Maintaining compliance with the rules and regulations around the safe processing of fuel-quality waste
- Supporting your needs through a team of safety, sales, and technical staff members who will answer your questions and find solutions to managing your waste
- Reusing your waste safely—the organic content is destroyed through co-processing which reduces the use of fossil fuels and raw materials
- Offering a competitive price with the added benefit of reusing your waste as alternative energy or a substitute mineral source
- Servicing you from our centrally located facilities in Ohio and Kansas, along with Geocycle facilities in Mississippi and South Carolina, accommodating customers from both coasts as well as Northern and Southern states
- Providing logistics assistance as needed

#### GETTING STARTED

It's easy to work with the Systech staff, who will guide you through the following steps:

1. Fill out a profile
2. Mail a representative sample to your local Systech representative
3. Receive approval letter
4. Submit a credit application
5. Finalize terms and contract
6. Schedule waste load delivery to Systech facility
7. Build your reputation as a green company

Let's talk. Call us at **800.888.8011** to get started on better managing your waste.
