

# Sugar Creek, Missouri

## LOCATION & CAPABILITIES

Located 15 miles east of Kansas City, Missouri just off MO-291, Systech’s Sugar Creek facility processes solid, non-hazardous alternate fuel materials including carpet, paper, wood, rubber strips, textiles, and plastics. These are then used as alternate fuel to manufacture cement on site. Sugar Creek also accepts iron, silica, and alumina wastes, which are non-hazardous raw materials incorporated safely and securely into cement as raw material substitutes.

The Sugar Creek facility receives materials by way of end dump/dump trailer; roll-off; supersacks; and van, truck and walking floor trailers. Bales are accepted.

Care needs to be taken to provide as clean of a stream as possible. Therefore, all materials must come in dry and free of metal and food waste.

## OVERVIEW
