

Calera, Alabama

LOCATION & CAPABILITIES

Located 40 miles south of Birmingham, Alabama just off Interstate-65, Systech's Calera facility processes solid, non-hazardous alternate fuel materials including paper, wood, rubber strips, carpet, textiles, shingles, oily rags, and plastics. These are then used as alternate fuel to manufacture cement on site. Calera also accepts iron, silica, and alumina wastes, which are non-hazardous raw materials incorporated safely and securely into cement as raw material substitutes.

Calera receives materials by way of end dump/dump trailer; roll-off; supersacks; Gaylord/cubic yard box; and van, truck and walking floor trailers. Bales are accepted.

Care needs to be taken to provide as clean of a stream as possible. Therefore, all materials must come in dry and free of metal and food waste.

OVERVIEW
